## PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, New England towns, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 21 (Massachusetts) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 21 (Massachusetts) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the Statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

October 1951.

## U. S. CENSUS OF POPULATION: 1950

### Volume

- I Number of Inhabitants
- II Characteristics of the Population

Succeeding volumes will cover the following subjects:

Census Tracts, Nativity and Parentage, Nonwhite Population by Race, Persons of Spanish Surname, Institutional Population, Differential Fertility, Labor Force Characteristics, Occupation, Industry, Income, Internal Migration, Education, Characteristics of Families and Households.

## U. S. CENSUS OF HOUSING: 1950

### Volume

- I General Characteristics
- II Nonfarm Housing Characteristics
- III Farm Housing Characteristics
- IV Residential Financing
- V Block Statistics

Housing statistics for census tracts are to be included in the Population reports on census tracts.

# MASSACHUSETTS

## Number of Inhabitants

**The State.**—Massachusetts was one of the Thirteen Original States. In 1820 Maine, previously a part of Massachusetts, was admitted to the Union as a separate State, leaving Massachusetts with boundaries substantially as at present. Its population on April 1, 1950, according to the Seventeenth Census, was 4,690,514. The State has a land area of 7,867 square miles. In 1950 there was an average of 596.2 inhabitants per square mile as compared with an average of 545.9 in 1940. Among the States, Massachusetts ranked ninth in population and forty-fourth in land area.

In 1790 Massachusetts, exclusive of the territory that later became the State of Maine, had a population of 378,787 (table 1). In 1950, 160 years later, the population was more than 12 times as large. Except in the last two decades of the nineteenth century, the decennial rates of increase for Massachusetts have always been lower than those for the Nation as a whole. By 1900 the State had a population of 2,805,346, or more than seven times its population in 1790. The gain of 561,070, or 20.0 percent, for the decade 1900 to 1910 was the largest numerical increase and most rapid rate of growth in the twentieth century. The gain of 373,793 between 1940 and 1950 represented an increase of 8.7 percent over the 4,316,721 persons enumerated in the State in 1940.

**Usual place of residence.**—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1,

1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

**Urban and rural population.**—The urban population of Massachusetts comprised 3,959,239 persons, or 84.4 percent of the population of the State (table 1). The urban population was living in the 84 urban places in the State and in other territory included in the 7 urbanized areas entirely within the State and in the Massachusetts parts of the 2 urbanized areas partly within the State. More than four-fifths of the urban population was living in urbanized areas (table 2).

The rural population of Massachusetts comprised 731,275 persons, or 15.6 percent of the population of the State (table 1). Of the rural population, 104,758 persons, or 14.3 percent, were living in the 69 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

**Urban definition.**—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,<sup>1</sup> and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course, the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

<sup>1</sup> Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

## MASSACHUSETTS

According to the new urban definition, the 1950 urban population of Massachusetts consisted of the following components: (1) The 3,034,825 inhabitants of the 39 cities of 2,500 inhabitants or more; (2) the 259,855 inhabitants of the 45 specially delineated unincorporated places of 2,500 inhabitants or more; and (3) 664,559 persons living in the urban-fringe areas of the Boston, Brockton, Lawrence, Lowell, New Bedford, Springfield-Holyoke, and Worcester Urbanized Areas and in the Massachusetts parts of the urban-fringe areas of the Fall River and Providence, R. I., Urban-

ized Areas. There were 83 towns in 1940 classified as urban under special rule according to the old definition. The urban population in 1950 under the old definition therefore consisted of the 3,034,825 inhabitants of the 39 cities and the 1,087,313 inhabitants of the 83 places classified as urban under special rule.

The following table presents the 1950 and 1940 population of the 83 towns in Massachusetts classified as urban under special rule and the classification of their 1950 population by urban and rural residence according to the new urban definition:

As shown in the table, 621,646 inhabitants of the places urban under special rule were classified as urban according to the new definition because they were living in urban-fringe areas, and 228,642 were classified as urban because they were living in 35 unincorporated places of 2,500 inhabitants or more. The remaining 237,025 persons living in these towns were included in the rural population. On the other hand, included in the urban population under the new definition were 31,213 persons living in 10 additional unincorporated places of 2,500 or more and 42,913 persons living in urban-fringe areas outside the 83 places classified as urban under special rule, all of whom would have been included in the rural population according to the old definition. The net loss in the urban population of Massachusetts which resulted from the change in definition therefore is 162,899.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1790 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

**Trends of urban and rural population.**—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the urban population rose from 2,411,877 in 1900 to 4,122,138 in 1950 (table 1). Both the largest numerical increase and the most rapid rate of growth over the 50-year period came in the decade 1900 to 1910, when the urban population increased by 583,862, or 24.2 percent. The increase of 262,662 between 1940 and 1950 represented a gain of 6.8 percent over the 1940 urban population of 3,859,476. Of the 39 cities in the State, 31 shared in the growth of the urban population between 1940 and 1950, with the rates of gain ranging from 0.2 percent for Somerville to 18.1 percent for Chicopee (table 4). In 1900 there were 784,176 persons living in the three cities of 100,000 inhabitants or more; by 1950 there were 1,611,572 in the seven cities of this size (table 3). The proportion of the State living in urban territory increased from 88.0 to 87.9 percent over the 50-year period. It had been as high as 90.2 percent in 1930.

Despite a loss in the first decade of the twentieth century, the rural population of Massachusetts increased from 393,469 in 1900

to 568,376 in 1950 (table 1). The largest numerical increase as well as the most rapid rate of growth in the rural population came between 1940 and 1950. The gain of 111,131 for the decade accounted for more than three-fifths of the gain in the rural population between 1900 and 1950 and represented an increase of 24.3 percent over the 1940 rural population of 457,245. The proportion of the population of Massachusetts living in rural territory ranged from a high of 14.0 percent in 1900 to a low of 9.8 percent in 1930, with the 1950 proportion having been 12.1 percent.

**Counties.**—The 14 counties in Massachusetts ranged in size from Nantucket with a population of 3,484 to Middlesex with a population of 1,064,569 (table 5). Between 1940 and 1950, 13 of the counties increased in population as compared with 8 in the previous decade. The rates of change between 1940 and 1950 ranged from a loss of 0.6 percent for Dukes to a gain of 25.5 percent for Barnstable. The largest numerical increase was recorded in Middlesex County, which had a gain of 93,179.

**Minor civil divisions.**—To the primary political divisions into which counties are divided, the Bureau of the Census applies the general term "minor civil divisions." The minor civil divisions in Massachusetts are the cities and towns.

Table 6 shows statistics on the population of each county by minor civil divisions for the last three censuses. The population of each unincorporated place is shown in *italics* under the town in which it is located. When an unincorporated place lies in more than one town, the population of the several parts is shown in table 6 under the appropriate towns, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of areas listed are shown in notes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 481-482, and reports of earlier censuses.

**Incorporated and unincorporated places.**—Massachusetts had 39 cities in 1950, all of which had 12,000 inhabitants or more. (Under a State law a town must have a population of 12,000 or more before it can be incorporated as a city.) These 39 cities had a combined population of 3,034,825. There were 114 unincorporated places of 1,000 inhabitants or more in the State. Of the 364,013 persons living in the unincorporated places, 104,758 were in the 69 unincorporated places of 1,000 to 2,500 inhabitants. The cities ranged in size from Newburyport with a population of 14,111 to Boston with a population of 801,444.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages, with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries

for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

**Urbanized areas.**—There were seven urbanized areas entirely within Massachusetts and two partially within the State. There were 3,395,699 persons living in urbanized areas in Massachusetts, 1,683,787 of whom were in the nine central cities in the State and 1,711,912 of whom were in urban-fringe areas. Of the persons in the urban-fringe areas, 1,047,353 were in 20 cities and 664,559 were in unincorporated parts (tables 2 and 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See urbanized area maps.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

**Central cities.**—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

**Urban fringe.**—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.
2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.
3. Unincorporated territory with at least 500 dwelling units per square mile.
4. Territory devoted to commercial, industrial, transportation, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within  $1\frac{1}{2}$  miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

<sup>1</sup> According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places urban under special rule are classified as urban places.

<sup>2</sup> Includes 664,659 persons in urban territory outside of urban places.

<sup>3</sup> Excludes population of Maine, admitted to the Union as a separate State in March 1820. The population of Maine was 228,705 in 1810, 151,719 in 1850, 96,540 in 1790.

## URBANIZED AREA MAPS

The eight urbanized areas having their central cities in Massachusetts, for which statistics are shown in table 9, are depicted in the following maps. The shaded areas, in combination, comprise the urbanized areas. To assist in locating the exact external

boundaries of the areas, each boundary feature (street segment, political boundary, or other) has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
